

PUBLIC CONTRACT INTELLIGENCE

# See where government buyers already spend money on what you sell.

Jarl AI Systems scans public contract data for award history, recompetete signals, incumbent vendors, agency buyers, contract values, timing clues, and practical next actions — so service businesses, contractors, suppliers, and specialized B2B operators know where to focus before opportunities become obvious.

[See sample output](#)

**Signal:** Security services award approaching recompetete window

HIGH FIT

**Incumbent:** Vendor identified from public award history

**Buyer:** Agency and office mapped for pursuit research

**Action:** Verify solicitation path, past performance fit, and registration readiness

# Government buyers may already be spending on what you sell. The problem is finding the signal.

Most businesses do not have time to dig through award histories, incumbent vendors, expiration dates, agency patterns, and recompetete clues. By the time an opportunity is obvious, better-prepared competitors may already know the buyer, incumbent, and likely timing.

## Scattered data

Award histories, agency pages, SAM notices, and public records are spread across messy systems.

## Timing matters

Recompetete windows and contract end dates can create early pursuit signals before a bid is visible.

## Focus beats searching

A short, prioritized pursuit map is more useful than endless portals and vague alerts.

SAMPLE OUTPUT

# Not a raw data dump. A pursuit map.

Each Snapshot is built to show who buys, who holds the work now, what the public timing signals suggest, and what action is worth taking next.

**Target:** Agency contract family matched to your service category

**Why it matters:** Public award history shows recurring spend and incumbent context

**Confidence:** High / Medium / Watchlist, with plain-English reasoning

**Next move:** Verify buyer path, registration readiness, and pursuit fit

## Start with a free Niche Signal Check.

Before you buy a Snapshot, send what you sell and where you want to sell it. If the niche does not show enough public contract signal, we will tell you before you pay.

## What this helps you avoid.

**Wasted database hours**

Stop burning time inside ugly portals before you know whether your category has usable public signal.

## Missing incumbent context

See who has held the work, where buyer spend has happened, and which timing clues are worth watching.

## Chasing too late

Bid boards show what is already obvious. Award history can reveal where to prepare earlier.

### FOUNDING OFFER

## Contract Radar Snapshot

Tell us your business type, target geography, and what you sell. We return a prioritized pursuit map of public contract signals that may point to future opportunities.

# \$497

Founding-client price. 2-business-day target delivery after intake.

## What you get

- 10-25 public contract intelligence targets in your category
- Agency and buyer details where available
- Incumbent vendor information

- Contract value and timing signals
- Fit notes and priority scoring
- Recommended next actions
- Clear confidence labels
- Human/Jarl QA before delivery

## **Best fit for businesses that sell real-world services.**

### **Security & facilities**

- Security
- Fire
- Access control
- Janitorial
- Maintenance

### **Trades & field work**

- HVAC
- Electrical
- Plumbing
- Construction support
- Equipment services

### **Specialized B2B**

- Fleet services

- Staffing
- Training
- Local service providers
- Niche suppliers

## WHY JARL

# AI-backed systems. Human judgment. No generic agency fog.

Jarl AI Systems turns messy public data into focused business action. This first system is focused by outcome, not locked to one vertical: contract intelligence for businesses that want better timing, better targets, and less wasted searching.

## Validated Snapshot upgrade

Need deeper review? The Validated Snapshot adds manual review of the strongest 3-5 targets in SAM.gov, agency pages, or other public sources where available.

**\$997** founding upgrade where scope fits.

## Monthly Radar Watch

**\$299/mo founding watchlist** for recurring signal refreshes after the first Snapshot.

**Important disclaimer:** Jarl AI Systems provides research and intelligence based on public data sources. We do not guarantee contract availability, eligibility, award, bid success, or

agency action. Buyers are responsible for verifying opportunities, eligibility, registrations, deadlines, and solicitation details before acting.

### **Jarl AI Systems**

Public contract intelligence for service businesses, contractors, suppliers, and specialized B2B operators.
